Subject : ELECTRONIC FLIGHT PLAN

PIA has successfully completed the testing phase of the **Electronic Flight Plan (EFP)**. All issues highlighted by the crew during testing have been duly addressed, and we are confident that the system has now achieved the level of maturity required for operational deployment. The salient features of the EFP are outlined in the manual available on the Crew App.

All crew members are requested to review the manual and update their iPads to enable receipt of the EFP for upcoming flights. This interim phase is intended to provide an opportunity for familiarization with the system prior to its formal launch, subject to approval from PCAA. **Till the time formal approval is not granted by PCAA the conventional hard copy of the flight plan has to be filled as per current policy.** Launch of EFP will be communicated later on.

Feedback and suggestions for further improvement are highly encouraged and may be shared via email at khioxpk@piac.aero or communicated to the undersigned through any appropriate channel. It is understood that some initial challenges may arise; this soft launch is designed to identify and address such issues ahead of full-scale implementation.
